

AUTOMATIC WEATHER STATIONS

Our range of automatic Weather Stations

XARIA-C

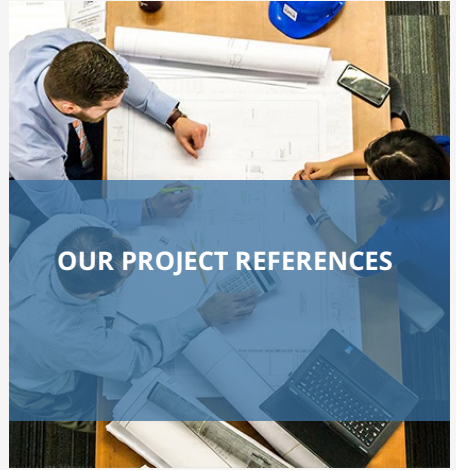

The XARIA-C automatic Weather station is designed to meet requirements for measurement and for the use of climatology networks and unmanned sites. It comes equipped as standard with 6 sensor inputs (temperature, humidity, rainfall, solar radiation, wind speed and direction) and one transmission line (PSTN or GSM) is available.

XARIA300

The XARIA300 is an automatic Weather Station designed to meet the latest requirements relative to meteorological data acquisition. It is highly modular, so it can be adapted to the specific needs of each different field of activity, including airports, agro-meteorology, or climatology.
